

# Energy sourcing made easy.

EnergyWindow™  
We do the work for you.

## WHAT IS ENERGYWINDOW?

EnergyWindow is an online energy procurement auction platform designed to support multi-location energy buyers. We enable you to take advantage of market pricing and leverage your buying power by helping you identify and select quality energy supply sources. With the help of E Source energy procurement specialists, we support you throughout the EnergyWindow auction process to secure the most cost-effective contract based on your needs.

## WHAT CAN ENERGYWINDOW DO FOR YOU?

- Shop continuously, not just when a contract ends, so you can take advantage of lower-priced periods in the market
- Drive out supply cost through highly competitive procurement events
- Streamline your request-for-quotation process and supplier selection so you can more easily manage procurement events on different products across multiple locations
- Reduce procurement costs with pricing options for no up-front or out-of-pocket expenses
- Save potentially thousands, even millions, of dollars in energy supply costs and procurement costs
- Minimize risk with no long-term commitment required to get started

Using EnergyWindow, E Source can help you select the best supplier based on price and other criteria with the speed and flexibility required to take advantage of fleeting market opportunities.

## HOW DO YOU GET STARTED?

## THE ENERGY WINDOW DIFFERENCE

**IT STARTS WITH YOUR ACCOUNT LIST.** We gather the utility data and turn it into what's required for the bid.

**WE PROVIDE BENCHMARKS.** Compare your bids based on tariff analysis and projections, wholesale price forecasts, current price, and budget.

**WE'RE HERE TO HELP AND YOU'RE IN THE LEAD.** We manage the auction process end to end while you stay in command.

**YOU GET THE MOST SUPPLIER OPTIONS.** Through EnergyWindow, we present the most complete roster of premium suppliers available anywhere.

**YOU GET FLEXIBILITY.** All types of auctions are available including reverse, sealed, and transparent. Plus, all products can be bid (for example, fixed, indexed, block and index, and heat rate).
