As we appr Utility cu	In 11, 3019 Does the Future of the Utility Industry Look Like?  and the end of the year. I find myself reflecting back on our signature event: the E Source Forum, which brought together more than 700 utility professionals for a week of education, innovation, networking, and fun in Denver. As the CEO of E Source Sources care about climate change, and you should too sources care about climate change, and you should too sources care about climate change, and you should too sources care about climate change, and you should too sources care about climate change, and you should too sources care about climate change, and you should too sources care about climate change, and you should too sources care about climate change, and you should too sources care about climate change, and you should too sources care about climate change from a different perspective; lumping people into groups of believers and in
What this s	means for utilities is that there isn't a one-size-fits-all approach to climate change and clean-energy communication or implementation. He challenged utilities to empower their customers to feel like they're part of the solution and to contribute to the
Watch the Watch th How Goo	Intention to ununes to such trace but a othersize-list and updated to Crimina Unique and order-leveley Communication in implementation, he challenged ununes to employee their costinates or energy expects or the southern and order-leveley communication intentive by visiting the Who Cares About Climate Changel Your Customers Do, and They Want Too to Care Too session page.  In executings gle and Microsoft view the utility industry and day of the Forum, during the From Dies and Wires to Al and VB session, I welcomed Hannah Bascom, director of energy partnerships at Google, and Vikram Singh, head of utility partnerships at Microsoft, for a conversation about how these tex
Bascom ag During the Watch ti  Join us ne The E Soun If you're an	e about the importance of technologies that enable utilities to achieve two specific goals: become more aglie and flexible and become extremely customer-focused. Specific examples of this include technology that allows utilities to better leverage reced about the importance of data but focused more on the importance of that data in context with the grid. There's a ton of data flying around out there, and I think making sense of all that data is really challenging," said Bascom. "If we think ab rest of the session, we tackled additional topics such as the disintermediation of the smart home, the reputation of the utility industry, how utilities should work with tech companies, and the safety of the cloud. We also conducted individual intervine recordings  xxt year  xxt year  xxt year  xxt year  xxt year  xxt year  xxt year who wasn't able to attend or if you attended and want to see which sessions you missed, you can <u>download the reservations</u> now. We also did a few new things this year. We conducted interviews with some of our speakers to (ii) juin us next year for 2002. Escure Forum. Spetchmer 22 to 25, in Perser, where were sure to line yan equally impressive roster of speakers; topics, sessions, and workshops.
