

Leverage the power of data and machine learning to optimize performance across your delivery operations

September 17, 2021

Data science company E Source has helped dozens of utilities optimize and streamline their delivery operations. The [E Source GridInform](#) (PDF) solution and our artificial intelligence (AI)-driven approach combine proprietary external data with your internal asset and operational data to create predictive models and algorithms that can help reduce operational costs while maintaining or improving system reliability. Featured modules include:

- Vegetation management
- Gas leak prediction
- Capital optimization
- Interruption prevention
- Integrated load forecasting
- Storm-outage prediction

Learn more about our [grid and asset optimization](#) solutions and how our [data science](#) team can help you optimize performance across your delivery options.
