

Episode 7: EV managed charging

How can utilities ensure grid stability amid charging and infrastructure concerns?

By Erin Penksa

November 1, 2022

Across the US and Canada, utilities have been preparing for the arrival of EVs for more than 10 years—and not without challenges. One of the major concerns with getting more EVs on the road is the potential strain on the grid. In this episode, host [Bryan Jungers](#) welcomes to the mic Stephanie Leach, principal business analyst at BGE, and [Jesse Hitchcock](#), senior analyst for Customer Energy Solutions at E Source, to talk about pilots, programs, and what utilities can do to smooth this transition.

Building your EV charger asset management plan: An E Source white paper

Anyone deploying electric vehicle supply equipment (EVSE) should build an asset management plan to ensure cost-effectiveness. The plan should include details on sizing, siting, installing, maintaining, and repairing the EVSE.
