

About the Grid Executive Conference

November 15, 2023

The E Source Grid Executive Conference is an exclusive event where utility leaders, executives, and visionaries converge to explore and influence the future of the energy grid. In a rapidly transforming landscape, this event promises a day of deep insights, discussions, and networking opportunities.

At our 2023 conference, attendees immersed themselves in thought-provoking sessions that unraveled the complexities of topics like the following.

Delivering reliability in the face of cost pressures

How can utilities manage costs as utility commissions across the US limit rates while increasing performance and reliability expectations?

Navigating data-informed grid investment strategies

How are utilities using data to make grid-investment decisions related to vegetation management, distribution infrastructure that supports an increasing number of EVs, and grid hardening?

And how are large utilities with diverse customers considering affordability and equity as they make grid modifications? How are performance metrics evolving, and how do we educate stakeholders?

Addressing the dynamic challenges of workforce planning and safety

How is data helping utilities tackle challenges associated with workforce planning and safety initiatives?

Planning for storm season with data-driven precision

How are utilities incorporating weather data and decision-making in their storm operations and storm response planning?

Who attends the conference

This invitation-only event allows attendees to engage with luminaries from Alabama Power, Duke Energy, PPL

Electric Utilities, and more, as they share real-world experiences and practical innovation that's reshaping the utility sector.
