Let machine learning transform the way you manage gas-distribution resources.

The E Source GridInform gas module leverages data science and artificial intelligence (AI) to predict gas leak repairs before they're needed— allowing your team to optimize staffing and resource planning.

GridInform's proven models gather data such as pipe age, type, and seasonality to provide significant predictive boosts that will augment your staffing plans. Built by E Source's industry-leading data science team, GridInform can help you:

- Make more-informed capital decisions
- Increase reliability
- Respond faster to events that demand immediate response

Our proprietary algorithms, built with AI and machine learning, offer measurable return on investment and short payback periods. And they come with field-tested results.

To schedule a demo and see how we've saved gas companies 15% to 20% in staffing and resource costs, **call or email us today.**
