

Plug into community solar to help build a clean energy future.

Support solar energy.

By participating in OPPD's community solar program you will get to share in the opportunity to help promote clean energy today and in the future. Community solar makes it easy and affordable to promote locally generated solar energy.

Why you should join.

- **1. You get affordable solar energy.** OPPD's community solar program is an affordable way to increase your support of renewable energy while keeping your costs low and predictable. This program offers the opportunity for you to be energy conscious and promote clean energy at a low rate.
- **2. Contribute to a cleaner environment.** Solar energy is a sustainable and renewable way to generate energy. Participating in OPPD's community solar program allows you to take a leadership role in support of 5 MW of clean energy to be generated and consumed throughout our communities.
- **3.** The first chance at potential financial savings. If the cost of the solar farm is met and the solar energy market rate is below the standard energy rate, participants will see an energy credit on their bills. As a participant, you won't see immediate savings, but enrolling in the program early secures your place for potential savings down the road.
- **4. Our community will grow its regional green economy.** When you enroll in the program, you help stimulate growth in the solar industry in eastern Nebraska by supporting the creation of local solar jobs.

How it works.

When you enroll in OPPD's community solar, you can subscribe to one or more shares. Each share represents approximately 100 kWh of electricity. Your monthly solar charge will be a monthly contribution based on the number of shares you choose to support. In order to secure your shares, there is a one-time refundable investment of \$100 which will be added to your first bill after you subscribe to the program.
