

# "THIS IS OUR BIGGEST RELIABILITY EFFORT EVER."

*Tom Graham, Pepco Region President*

## Reliability Update - Spring 2012

We're improving reliability for customers across our entire footprint as we replace aging power lines, upgrade technology and work proactively to enhance service. We've made significant progress since September 2010.

- **2.3 million feet of underground lines** replaced or renewed for reliability
- **153 advanced switches** installed to reroute power faster
- **3,795 miles of trees** trimmed to help prevent outages

We've been working hard to improve reliability. Our work continues.
